

## DBMS LAB ASSIGNMENT

### DATABASE ENTITY RELATION DIAGRAM

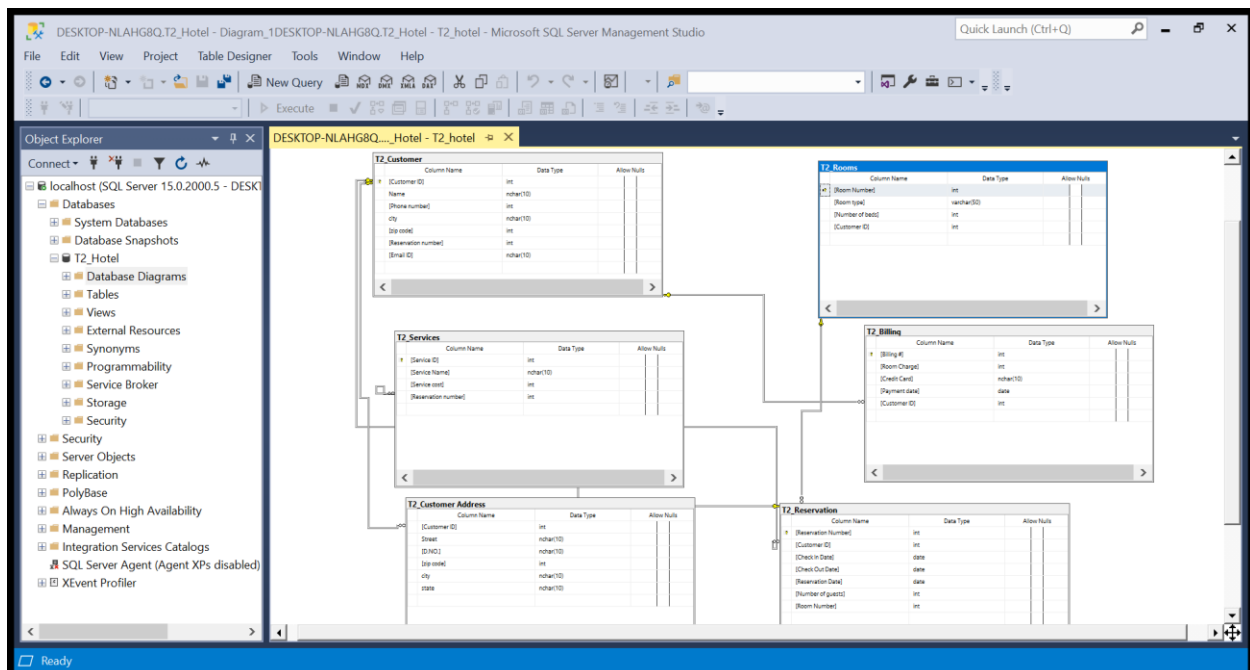

NAME : SURYAWANSHI RANDHEER AJIT

REG NO : 19BCS104

TOPIC : HOTEL DATABASE ENTITY RELATION DIAGRAM

Group Number : 2

### E.R DIAGRAM :

- What is a weak entity?

In a relational database, a weak entity is an entity that cannot be uniquely identified by its attributes alone; therefore, it must use a foreign key in conjunction with its attributes to create a primary key. The foreign key is typically a primary key of an entity it is related to. Weak entity in our ER model

In the above ER diagram the entity Customer Address is a weak entity because it can't be uniquely identified with its own attributes. As we could notice there is no separate primary key for the Customer Address entity.

The Customer I.D key acts as primary key and foreign key for the Customer Address entity. The Customer Address is completely dependent on the Customer entity's primary key i.e Customer I.D.
